Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Rava et al. Rava et al disclose a system for analysis of an in vivo biological sample using infrared attenuated total reflectance measurements. The infrared source is a middle infrared radiation source which is used with a Fourier transform spectrometer (column 12, lines 61-63). An optical fiber is coupled to an unclad interchangeable fiberoptic probe (see figures 16a-b, column 13, lines 14-43). The fiberoptic probe is configured to be in direct contact with the sample. The radiation used is within the ranges set forth in the claims. The fiberoptic probe can include a needle probe or can be configured as a percutaneous probe. The peaks of the spectrum are analyzed to compare healthy tissue with diseased tissue.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9,10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rava et al. Rava et al disclose a system for analysis of an in vivo biological sample using infrared attenuated total reflectance measurements. The infrared source is a middle infrared radiation source which is used with a Fourier transform spectrometer (column 12, lines 61-63). An optical fiber is coupled to an unclad interchangeable fiberoptic probe (see figures 16a-b, column 13, lines 14-43). The fiberoptic probe is configured to be in direct contact with the sample. The radiation used is within the ranges set forth in the claims. The fiberoptic probe can include a needle probe or can be configured as a percutaneous probe. The peaks of the spectrum are analyzed to compare healthy tissue with diseased tissue. It is well known in the art to examine various features of the optical spectrum obtained such as intensity of peaks and compare intensities using ratios in order to determine the presence/absence of abnormal tissue. In the absence of any showing of criticality or unexpected results, the specific spectrum comparison used would have been an obvious design choice of known equivalents in the art.

Response to Arguments

Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
